TSCA INFORMATION NOW CURRENT THROUGH June 29, 2007

Please note that search-term pricing does apply when conducting SmartSELECT searches.

REGISTRY includes numerically searchable data for experimental and predicted properties as well as tags indicating availability of experimental property data in the original document. For information on property searching in REGISTRY, refer to:

AB Polymers are described which comprise ≥5 mol % of a repeating unit comprising a substituted phenanthrene moiety which binds to the polymer chain via (substituents at) the 2 and 7 positions. Bifunctional monomers from which the repeating units may be derived are also described. The polymers may incorporate addnl. repeating units which may affect the emission characteristics of the polymer. The use of the polymers or of blends containing them in electronic devices (e.g., polymer organic light-emitting diodes, organic FETs, organic integrated circuits, organic thin-film
